

GOONYELLA COAL SYSTEM

Goonyella, already the world's largest metallurgical coal rail system, will continue to grow as the Dalrymple Bay Coal Terminal expands and when the Goonyella to Abbot Point Expansion rail project links Goonyella to the Newlands coal system in 2012.

The \$1.1 billion rail link will significantly increase supply chain capacity and give customers on the Goonyella system the flexibility to export their coal through the ports of Abbot Point and Hay Point. In addition to the rail extension, QR National is undertaking upgrades to the Goonyella rail infrastructure to expand rail capacity by 11 million tonnes a year.

QR National's multiple crewing points, including a new train crew depot in Moranbah (opening in 2011–12), are designed to meet the operational challenges presented by Goonyella's long hauls (up to 300 kilometres) and enable supply chain velocity. Our Jilalan rail yard, situated 35 kilometres west of the Port of Hay Point, has state-of-the-art locomotive and wagon maintenance depots, where our experienced maintenance staff service our fleet of specially designed heavy haul locomotives which optimise capacity on the electrified system.

QR National's customer focus and world-class infrastructure and facilities make it best placed to realise the benefits of this busy and ever-growing coal supply chain.

QR NATIONAL COAL HAULAGE FACTS 2010–11*

*Tonnages were affected by widespread flooding and rainfall

Million tonnes	74.1
Services	7409
Kilometres travelled	3.2 million
Average payload	10,000 tonnes
Motive power	Coal electric locomotive

SYSTEM FACTS

Track manager	QR National Network
Track axle load	26.5 tonnes
Track gauge	Narrow (1067 mm)
Track configuration	Majority duplicated
Export terminals	2
